

CALMAN RGB

MONITOR CALIBRATION SOFTWARE

Ensure color accuracy across all your displays.

Select Standards

Select from a long list of established colorspace and gamma standards

Optimize Settings

Accurately adjust your monitor's internal settings before each calibration.

Manage Profiles

Create multiple profiles for each monitor with an independent client app.

Analyze Performance

Understand your monitor's unique characteristics with detailed charts and graphs.

Compare Results

Easily switch between calibrated and uncalibrated profiles.

Network Calibration

Calibrate any other computer monitor over local network connection.

Custom Settings

Select from a variety of established colorspace and gamma standards or create your own custom calibration settings, including luminance and whitepoint.

Automated Profiling

Monitor calibrations with CalMAN RGB are fast, easy and completely automated. Users can also select a more advanced workflow for especially detailed adjustments.

Independent Client App

CalMAN RGB uses an independent ICC profile manager app, so you can easily switch between profiles and calibrate monitors remotely over network connection.
